

An Ancient Secret to a Virtually Invulnerable Immune System and Radiant Health

A LIFELONG TESTIMONY OF THE THERAPEUTIC ROLE OF SILVER BOTH NOW, AND IN HISTORY: NONA COMBS, born 1919 Rocky Rapids, Alberta, Canada was interviewed by a past Canadian manufacturer of Colloidal Silver products.****

My first time of hearing about the benefits of silver was through my Dad – Harry Fell who was the son of an ancient aristocratic family in England. He came to Canada many years ago to make his fortune. He pioneered south of the Wabamun Lake in Alberta, and the family had old-fashioned pure silver utensils like - knives, forks, big serving spoons and little ones, silver cups and bowls, and we had a big revolving cruet serving stand. My dad always said, *“You children always drink tea from this tea pot as it is silver. You will have good health if you use these silver bowls to eat out of, cook in, or keep food in.”* He also said we were of the blue blood, because our ancestors were from England. Of course I didn’t take this all to heart because I thought he was bragging about his English ancestors and I didn’t like that.

But I’ll have to admit my Dad was never sick. He lived to be 93 and worked very hard, getting up every day at 5 AM, and working until late at night.

He did not eat a lot like some people do. He could cut more railroad ties than any of the men around where we lived and ate half of what they did. I remember he always took a 2 qt. sealer of tea made in the silver pot and a loaf of brown or raisin bread. We only had chicken or turkey and fish for meat. He put the sealer of meat in a wool blanket on some rocks heated in the oven every night and came home about 5 PM in winter. He did all the chores before he came in the house.

I also must say I was not sick either. We had 3 miles to school and I was always there. After I was married, I had one child after another and was extraordinary strong and well and my Doctor said to me one time when I was in Edmonton to see her (Dr. Mildred Newell, she was a baby specialist at that time. She took care of me for 13 children), *“Mrs. Combs you have blue blood”*. Oh! I said, *“How do you get that”?* And she said, *“Well, you will have to be from England or the old country because there they use silver utensils to cook and eat out of and therefore they call them the blue bloods.”*

So this was after my dad told us about the blue blood and silver and of course I scarcely believed it. But since my doctor knew this, it confirmed what my dad said. I certainly must have had something to sustain me, as I had 17 children and lost none, not even a miscarriage. I knew the doctors used silver in the 1930’s as my mother nursed and told us about *the doctors saying* to get some colloidal silver and take it every day. People in the country could not afford that. It didn’t sink into my head until this year 1999 when you came with this colloidal silver and the little Book that told about it. I think everybody should take colloidal silver every day to keep colds and the flu and infectious disease out of us.

Olex: Nona, you told us was that your Dad made a point of eating with silverware, using pure silver teapots and silver cups, and silver utensils. He knew that he was benefiting by an improved or a boosted immune system.

Nona: That’s right.

Olex: We used to think that this was just an historical account of aristocratic grandeur, and that it was quite by accident that they got the benefits of silver in the old countries. You are telling us that they actually clearly knew that this expensive silverware was effectively improving their health! It wasn’t just luxury, it was prudence and foresight also!

Could you tell us a little bit about how your dad and your granddad came to Canada knowing the health benefits of silver?

Nona: My grandfather, Robert Ernest Fell, came from England in about 1860. He and his 3 brothers were sent over here to make their fortune. They gave them the solid pure silver utensils that they used in England, because they were very well off people. Each boy was given a whole set to cook from, to eat from, a teapot to get tea from, and a cruet-serving stand. We had a silver bowl holding 2 or 3 qts that was very expensive. We also had smaller bowls, and plates. Of course, my mother didn’t like their tarnish.

I always remember this revolving cruet serving stand, because it was such a big thing. It was about a foot high with a large silver base holding it about 8 inches off the table. It was all silver and had holes about four inches in diameter with little jars for vinegar, mustard, sauces, oil, salt and pepper, spices, etc. These glass jars were about eight inches high and had a pointed silver top on the lid and a silver base. There was glass from the top of the base where the holes for holding these containers were, so you could see what was in them. It was in the middle of our table all the time to give us you what we wanted. We also had a big tall teapot with a big handle and spout. It was rather elegant.

I thought he bragged to me because he had this stuff; because he knew this was good for us. He told us, “*You drink tea from this silver teapot and don’t use the old glass teapots to make tea!*” He used to take this tea in a 2 qt. sealer to work with him. He never took that teapot off the table after scouring it.

He would work hard cutting ties in the winter and he would cut more ties than anybody, even though there were lots of bigger men than him. He would cut a hundred ties a day and put them on the landing while he ate nothing but this tea and whole wheat bread and raisin bread. He did more work than anybody I know. He never came in the house after work; he just went out and did all the chores. We had horses, cows, chicken, turkeys and all kinds of things and he did all the watering, feeding and cleaning every night. He was the healthiest man I’ve ever seen.

Olex: Nona, you said he came through the great flu plague of 1918?

Nona: Yes, he did! Everybody had the flu but he didn’t.

Olex: And he was out there doing the chores of all the people?

Nona: Ten families, he made his circle around the district and he helped ten families and not one of them died. He gave them Watkins and he did the work and they stayed in and he got the wood for them so their house would be warm.

Olex: And the interesting thing was is that he gave the credit of his good health to the influence of silver! And you say that even back in England that, your granddad or great granddads were using silver and they that had a strong immune system. The servants who ate out of earthenware and iron pots didn’t have this?

Nona: Yes, they died when the black plague came. *None of the ones that used silver died.* This happened not only in England, but also in France, Germany, and all the Balkan countries. The wealthy people, the aristocrats used silver while the poor people didn’t have it, and died. My dad just kept on bugging me, telling me that I was of the blue blood.

Olex: So he said you were a blue blood and you thought it was just a meaningless old wife’s tale?

Nona: Yes, I thought he just was bragging about being an old English ancestral aristocrat and what are you doing that for? But you know I valued what my dad was: he was a very strong person, not big; just a little guy, and he lived until he was 93 and I never saw him sick one day. I never heard my dad coughing and choking or crying or saying I’ve got a stomachache today or anything. I can’t remember one day that he complained about anything not even a headache, and he was still reading without glasses when he was when he was 90 years old.

Olex: Isn’t that something. You are talking about your dad and how strong and healthy he was and yet we’re looking at you and you are 80 years old and yet you get around like a 50 year old.

Nona: Well anyway, I have to say that I must be healthy. I had one child after the other from the time I was 16 until I was 45. I had one child every other year, and they were well and healthy. I’m still well and healthy and they tell me now that the silver does not go away with the first generation. I’ve got 17 very healthy children, just healthy like you don’t see.

Olex: So you feel you inherited the benefits from the silver, and so did your children.

Nona: Yes, but, it will be lost over the generations if they don’t go back to silver. Some of them have already gone back. My daughter has been on it for 10 years and the rest of them aren’t listening to her because they’re like me when I didn’t want to listen to my dad.

First my daddy told me about silver, and then 40 years later, my Dr. Neil told me, “Nona you’ve got blue blood.” This made me think and so, I asked her how did you come by that and what makes you think that, and she said, “Well, I know people from all over the country, especially from England that have blue blood, because they ate some silver. I’ve known this all my life, but there was hardly anybody that could afford it; so they didn’t have it anymore. It was at that time that they started using penicillin.”

Olex: So that was the end of silver.

Nona: That was the end of silver because the doctor got the money for prescribing antibiotics and so she said, “We don’t use it anymore, but I know you’ve got blue blood, cause I’ve seen your blood has a blue tint.

Olex: That’s really interesting that she recognized....

Nona: Yes, if you had seen it laying there, it had a blue tinge on the top.

Olex: From this, she knew you were most likely from a lineage of British aristocrats!

Nona: Yes, and they had money enough to have children. She knew this, and then I knew that, my goodness! What my dad told me must be true, but I hadn’t wanted to listen to him. I knew that I must have something special to be able to have all those children and not lose any. Now I’m not going to give myself all the credit, because I know that there has to be some reason for a person feeling that well you know.

She used to take a silver spoon, and tie a string on it so it wouldn't get lost in the cream can, and put it in the cream can in the creek. It was hanging in the creek to keep cold, and if there was an electric storm coming you lost your cream and you lost your pay for that week. We lost that cream if it got sour so she would put that silver spoon in there and it would not sour. The lightning and thunder would sour the cream, but if the silver spoon were in there it wouldn't sour. She'd pull the string out the next day, because it would turn green if you leave it in there.

Olex: Isn't that something.

Nona: She knew that the silver was effective since she was a nurse.

Olex: Now you mentioned one thing earlier there, you said that at one time they used to take silver because [the doctors prescribed silver as a supplement or as a treatment](#). Did they call it colloidal silver?

Nona: Yes, they did.

Olex: But it was extremely expensive and out of reach for most people?

Nona: Yes that's right.

This experience with silver in my family went back to the 1700's that we know about. I do know that my family were sent over here to Canada with these silver utensils, knowing the health benefits. They were well off, they were given money, I don't know how many hundreds of pounds they were given, but they were given lots of money. They ran out of course, since there was nothing here. They had expected to find a fortune, but it wasn't here.

I know that colloidal silver is the thing to take: it does not spoil, it does not addict you, and you can take it the rest of your life and never have any negative affect on us. It doesn't make you addicted, it will not tear down your immune system; it doesn't do that. I had to be the toughest little kid you ever seen. I didn't even get sick. I was the one that would listen to my dad. I never got whooping cough, I never got scarlet fever, I never got chicken pox, I never got measles, when the other kids at school got them; I never got them. I never had one of those contagious diseases.

Olex: Nona, that's really interesting! Now there is a group out there that oppose the use of colloidal silver and are basically saying it's unhealthy to take. They're claiming that people that consume silver turn grey. Now, I'm looking at you and you're not grey, you've got the normal skin colour, that we all have and you still have the benefits of silver in your system. Did your dad's skin look grey that you can remember? Did any other family member?

Nona: His skin was never grey. He had the most beautiful skin.

Olex: There was no obvious outward appearance on the colour of the skin of these people that had consumed their food from silverware?

Nona: No, and his dad never died 'til he was 95 and if he was ever sick, I never knew it either.

Olex: That's really something.

Nona: Granddad never looked like an old man. This is his picture. (Shows a picture of him)

Olex: How old was he then?

Nona: 95, and these pictures were from 1860; my dad was born in 1890.

Olex: And of course you know we have recognized over the last year and a half that we've been taking colloidal silver as a supplement that our immune systems have dramatically improved.

We may get a touch of the flu, and we may get a touch of the cold, but we don't get dragged down with it the way we used to. It doesn't take us out of commission!

Nona: Last year I never had one cold. (She is now 80)

Olex: That's a big thing today; everybody's got the flu or colds...

Nona: The doctor says to me you go and get your flu shot, I said, "I will not be getting any flu shot", and I won't. I think that if anybody isn't too headstrong, they should get some colloidal silver.

Olex: Well, we certainly agree with you Nona!

The Implications

Looking ahead, if we take your life story at face value, we can extrapolate tremendous implications for the whole world and the way it will live in the future. Life is more valuable than life insurance. Health is more valuable than health insurance!! Within a generation or two of consistent long-term use of quality colloidal silver, life could be revolutionized:

- Men will gain the privilege of being born straight, **strong** and happy, and staying that way for over a hundred years.

- Their progeny will be born with far less difficulty to live similarly straight and strong lives.

Let us examine the evidence for this directly from Nona's story:

1. Her blue-blooded ancestors had deliberately allowed their food and drink to be mixed with small amounts of silver from their silverware every day throughout life. They used the old-fashioned pure silver silverware which was pure real solid silver, prone to tarnish. This pure silver that was not coated or alloyed to prevent or reduce tarnishing, was also solid so that the gradual natural erosion of surface layers did not make the silverware ugly.
2. "Never sick. He lived to be 93 and worked very hard" Global healthcare is now feasible! People over 45 today, often live life with reduced productivity. This "retirement" custom may become obsolete.
3. "He did not eat a lot like some people do. He could cut more railroad ties than any of the men around where we lived and ate half of what they did." With this highly efficient metabolism, global food shortages can become a myth. [Everybody can live in a high state of fitness and productivity, even with just a basic diet.](#) How long would he have lived with a quality diet?
4. "I had 17 children and lost none, not even a miscarriage" At present childbirth is fraught with difficulty. This does not need to continue to be a high-risk natural function. Bearing children will become a financial and lifestyle decision rather than a medical one.
5. "An improved or a boosted immune system." "He was the healthiest man I've ever seen." *"None of the ones that used silver died (of the black plague.)"* The spectre of disease will become a rare thing, relegated to the history books. Today's scare with drug resistant disease is a game you do not have to participate in. Germ warfare will not affect you if you have been taking it for a while. Larger recent doses will also have a dramatic effect.
6. "It never had any negative affect on us. It doesn't make you addicted, it will not tear down your immune system; it doesn't do that. I had to be the toughest little kid you ever seen. I didn't even get sick I never got whooping cough, I never got scarlet fever, I never got chicken pox, I never got measles; when the other kids at school got them, I never got them. I never had one of those contagious diseases." Even most vaccination programs will become obsolete. When new long-term studies are completed on silver they will find no downsides to judicial use of dietary silver.
7. "Dads' skin was never grey. He had the most beautiful skin." "Granddad never looked like an old man." Recent talk about a grey pallor found in silver users stems from extremely heavy use of very poor quality contaminated colloidal silver, not proper use. Undesirable large particles of silver (from low-voltage generators), or certain silver compounds may cause this rare discolouration.
8. *"The doctors prescribed (colloidal) silver as a supplement or as a treatment."* The use of dietary colloidal silver is medically mainstream, although not currently fashionable in today's crisis-centred medical establishment. It is a well-known and reliable preventative.

To see the role of dietary silver, we must understand that silver is neither especially chemically aggressive, nor highly mobile in bodily tissues in comparison with many drugs and water-soluble vitamins such as vitamin C. These are used by the body, and flushed out again within hours. The full benefits of colloidal silver use follow long-term use, although apparently miraculous recoveries often happen quite quickly.

Using silver for health purposes is then more of a quality of life decision than a crisis intervention decision. Her forebears were highly intelligent and had full use of their faculties until the end. Nursing homes may become almost obsolete. The healthy elderly will cease being a financial drain on the younger generation, since they will remain productive citizens.

[So if it is so good, why isn't it better known?](#)

Novelty: In 1950, after almost two decades of hardship in depression, world war and recovery came prosperity: the world became both infatuated and intimidated by a number of new technological outcomes from the war. The jet engine, the A-bomb, new car models every year that were not just black, easily available international air travel, television, suburbs, and a host of new consumer goods enthralled the public. Many of the top innovations of this time were medical, since the profession received so much practice in the war. If it was new, it had to be the best.

Advertising: Around 1951, doctors and veterinaries everywhere started to be inundated with colourful advertising brochures and generous free samples of the newly emerging drugs. Fabulous claims were made.... And delivered upon!! Today this flood continues together with promotional give-aways, free trips or sumptuous banquets. When a patent drug is involved, billions of dollars are involved. A few side effects are surely to be

ignored to obtain such magnificent promises!!

Wartime: When antibiotics were introduced, they were superior to all previous approaches for war casualties. It was superior to silver since colloidal silver production technology was still primitive and difficult. The product quality was poor and weak. Wartime conditions demanded a fast answer to massive and devastating infections. Antibiotics were certainly faster and cheaper than the colloidal silver of the time. They therefore quickly gained wide military, and governmental adoption as standard practice. Previous expensive approaches were forgotten.

Cost: The costly silver metal was used inefficiently, with much labour and high end technology, so the product was \$200.00 an ounce during the 1930's. That was back when that much money could buy a piece of land! It was certainly not nearly as effective as today's quality products. Today's bottom end colloidal silver is usually at least equal to the best that was then available. Today, inexpensive modern technology makes very efficient use of the silver metal, so that it is no longer costly.

Medical Mentality: Another factor is how a doctor's office works. A medical practice today still works within a wartime paradigm. The first thing a doctor does is "triage", that is to quickly sort you out to see who should deal with the patient, and when. Preliminary lab work is undertaken to verify. Just as in super-busy wartime, most patients do not show up until something is wrong. When people do show up in front of a doctor, they want a solution, and they want it now. There is a line up of people wanting these immediate answers. There is a constant emergency mentality. Payment is not issued for successful healings, but rather for the number of procedures done or patients seen.

Speed: Colloidal silver, even with today's superior and more economical products, is more suited to prevention, than it is to fast emergency situations. Colloidal silver takes a bit longer to reach effective levels in tissues that are starting from a zero silver content, because their non-aristocratic parents neglected to provide the inexpensive basic health care that a small daily silver input supplies.

Respect for Products: To reach comparable effectiveness to today's highly concentrated quality pharmaceuticals that are taken in measured quantities, diligently on schedule: a patient needs to diligently and appropriately use adequate quantities of highly concentrated, quality **Colloidal Silver** on schedule. Only then, can comparably fast results be expected.

Profits: Colloidal silver cannot be patented since anybody can obtain the equipment to make it. Competition keeps prices way down. In contrast, patented drugs are darlings of the stock market with their fast bonanza.

Location of Infection: Bodily cavities such as eyes, ears, throat, sinuses, vagina, and both ends of the digestive tract often require use directly within the cavity to be able to directly come in contact with the infection. If this is done faithfully on schedule, infections located there are rapidly removed, unless mucous shields infected tissues. Such mucous should be removed so the product can quickly and directly contact the infection. Even concentrated colloidal silver solutions are recommended for use within any bodily cavity for fast results.

For skin problems, antibiotic, or hormone creams are diligently applied topically on schedule. Similarly, skin problems need to have an appropriate concentrated colloidal silver ointment such as **Colloidal Silver Ointment** diligently applied on schedule. Slow moving hidden viral infections, such as warts take time. Little blood flow reaches them bearing the product. Bacteria are usually removed more quickly than viruses, since they are not hidden within body cells.

The Pay-off

Nona's wonderful testimony tells us, however, that more important than perpetuating this crisis mentality; is the long-term daily use of colloidal silver. Initially, more is used until adequate tissue levels are established. It is then that every bodily system can gradually regenerate itself without the interference of unseen established bacterial colonies. Every part of the metabolism then, can gradually move towards the mythic remarkable metabolic efficiency that the ancient "blue-blooded" aristocrats enjoyed with the proven healing enhancement qualities of colloidal silver: (See table below)

MODERN ANTIBIOTICS	HIGH QUALITY COLLOIDAL SILVER
--------------------	-------------------------------

BEST ROLE: EMERGENCY INFECTION RESCUE	BEST ROLE: IMMUNE SYSTEM BOOSTER
SPEED: CORRECT ANTIBIOTIC QUICKLY EFFECTIVE AGAINST SPECIFIC HIGHLY ESTABLISHED AND LIFE-THREATENING INFECTIONS	SPEED: WORKS RELIABLY ON ALL ESTABLISHED INFECTIONS, INCLUDING VIRAL INFECTIONS.
EFFECTIVENESS: HIGHLY EFFECTIVE AGAINST BACTERIA ONLY IF PRESCRIBED ACCURATELY. LAB TESTS TAKE TIME, SO EMERGENCY CONDITIONS REQUIRE AN EDUCATED GUESS AND POSSIBLE ERROR	EFFECTIVENESS: EFFECTIVE AGAINST ALL INFECTIONS, INCLUDING VIRULENT GERM WARFARE STRAINS. DOES NOT INTERFERE WITH ANY BODILY PROCESS, INCLUDING THE USE OF ANY PRESCRIBED MEDICATION
EFFECTIVENESS AGAINST VIRUSES: NONE; IN SPITE OF COMFORTING MYTHS	EFFECTIVENESS AGAINST VIRUSES: SLOWER EFFECTIVENESS THAN AGAINST BACTERIA *, BUT SURE
EFFECTIVENESS IN ENVIRONMENT: NO	EFFECTIVENESS IN ENVIRONMENT: YES!!! TREATS POOLS, HOT TUBS, MOLDS ON PLANTS, ON SHOWER WALLS AND FOR NON-TOXIC STERILIZING OF MUNICIPAL SEWAGE EFFLUENT!!
TOXICITY: SOME TOXICITY AT RECOMMENDED DOSAGES. DO NOT TAKE MORE THAN PRESCRIBED DOSE.	TOXICITY: NONE AT ANY CONCENTRATION
INTESTINAL FLORA: MOST KILLED, BUT YEASTS AND FUNGI: THEY ARE LEFT TO FLOURISH WITHOUT COMPETITION	INTESTINAL FLORA: SILVER ABSORBED BEFORE LOWER INTESTINE IS REACHED. EFFECTIVE AGAINST YEASTS AND FUNGI. A HEALTHY POPULATION OF FLORA IS MAINTAINED.
RESISTANT BACTERIAL STRAINS: DRUGRESISTANT STRAINS ARE BECOMING A SERIOUS PROBLEM, ESPECIALLY IN HOSPITALS. A STRAIN OF RESISTANT LATENT TB IS NOW WITHIN ONE THIRD OF OUR POPULATION.	RESISTANT BACTERIAL STRAINS: NONE. IT CANNOT BE ADAPTED TO SINCE IT WORKS QUICKLY WITHOUT RELATING TO CELL CHEMISTRY. IT EFFECTIVELY KILLS DRUG RESISTANT STRAINS, INCLUDING STAPH AND STREP
PREVENTION: NOT RECOMMENDED TO PREVENT ILLNESS. USED ON PRESCRIPTION AFTER CORRECT DIAGNOSIS IS OBTAINED	
METABOLIC BENEFITS: NONE	METABOLIC BENEFITS: ENHANCES AND SPEEDS ALL HEALING. CANCEROUS CELLS CHANGED BACK TO NORMAL CELLS
GENERAL ANTISEPTIC USE: NOT RECOMENDED	GENERAL ANTISEPTIC USE: VERY EFFECTIVE IF IT HAS A FEW MINUTES TO WORK. DOES NOT STING, OR KILL BODY CELLS AS HARSH CHEMICALS DO.
LONG TERM USE: CREATES RESISTANT BACTERIAL STRAINS, TOXICITY AND PROBABLE CANDIDA INFECTION	LONG TERM USE: THIS IS THE BEST APPLICATION FOR THE PRODUCT. PROBLEM FREE.
TOPICAL USE: LIMITED	TOPICAL USE: RECOMMENDED FOR USE TOPICALLY AND WITHIN ANY BODY CAVITY
SAFETY: ONLY AS PRESCRIBED	SAFETY: NOW USED BY SOME MEDICAL DOCTORS TO DISINFECT THE EYES OF NEWBORN BABIES
PRODUCT CARE: ROOM TEMPERATURE OR REFRIGERATED	PRODUCT CARE: KEEP FROM FREEZING, LIGHT, MAGNETIC FIELDS AND MICROWAVES.
PRODUCT FUTURE: UNCERTAIN AS A RESULT OF GROWING BACTERIAL RESISTANCE, WHILE A HUGE RESEARCH COMMUNITY IS LOOKING FOR PROFITABLE PATENT ALTERNATIVES.	PRODUCT FUTURE: UNCERTAIN SINCE THE TECHNOLOGY IS WITHIN THE PUBLIC DOMAIN, AND THEREFORE UNPATENTED, AND POORLY REGULATED AT PRESENT

*A virus is particularly hard to kill at the best of times. In the first place, it is not alive in the conventional sense. It does not have cells, but is merely a piece of floating genetic information. Secondly, the virus must be directly in contact with a silver particle in order to be killed. They spend most of their

time either replicating within the cell wall of body cells, or surrounded by its own protective layer of protein. They also often spend long periods of time dormant within cells; but when they do emerge from their cells, if silver is there, a virus is killed within ten minutes. Some persistence is often required for viruses.

** Anthrax spores are protected by a thick coating. These spores can be washed away without harm. Spores that come in contact with warm, moist flesh come alive and emerge from their protective coating. Each individual active anthrax bacterium will be smothered to death by ten minutes of contact with colloidal silver particles. The key is contact, and not all spores will emerge at the same time, so more time is needed. Follow other instructions for Colloidal Silver use above, as well. This is easier than a virus to kill.

*** Smallpox, bubonic Plague and other germ warfare agents: follow regular directions for Colloidal silver use. If you are new to the product, you need to build up your serum level of silver to achieve full effectiveness, so take more to start!

PREVENTION: BEST USE IS DAILY TO PREVENT ALL ILLNESS CREATED BY ANY SINGLE-CELLED BACTERIA, VIRUS, PROTOZOA, YEAST OR FUNGUS

This article talks about Nona's old sterling silver teapot a lot. Modern colloidal silver was not available then, though some primitive and highly costly attempts were. The modern product is both stable and has a very tiny particle size- which makes it far more effective and efficient than the large particles and unbeneficial chemical derivatives etc. the tea obtained from the silverware. But who lives on constant diet of tea these days? Have you priced pure, solid sterling silverware lately? Scary. And then it would likely be stolen these days. I typed this out from the original interview notes and resources. I use the product.
